ΟΛΥΜΠΙΑ ΔΩΜΑΤΑ

OR AN

ALMANACK

for the Year of our

LORD GOD

1699.

Being the 3d after Bissextile or Leap-year, and from the Worlds Creation, 5648.

Wherein is contained the Lunations, Conjunctions and Aspects of the Planets, the increase, decrease and length of the day and night, with the rising, Southing and setting of the Planets, and Fixed Stars throughout the Year, whereby may be known the exact hour of the night at all times, when either the Moon or Stars are seen.

Calculated according to Art and referred to the Horizon of the ancient and renowned Borrough-Town of *Stamford*, whose Longitude is 24 degr. and Latitude 52 deg. 41 minutes, fitting all the middle Counties of ENGLAND, and without sensible errour the whole Kingdom.

By *JOHN WING*, Mathemat.

CAMBRIDGE,
Printed by *John Hayes*, Printer to the University, 1699.

Common Notes for this present Year, according to the

Julian, English or old account.		*Gregorian* or new account.
9	The Golden Number	9
28	The Cycle of the Sun	28
9	The Epact	29
A	The Dominical Letters	D
7	The *Roman* Indiction	7
19	The Number of Direction	22

The Terms and their returns this Year.

Hilary Term begins January 23, and ends February 11, and hath 4 returns, viz.	Octab. Hilar.	January 21
	Quind. Hilar.	January 28
	Craft. Purif.	February 4
	Octab. Purif.	February 10
Easter Term begins April 26, and ends May 22, and hath 5 returns.	Quind. Pasch.	April 24
	Tres Pasch.	May 1
	Mens. Pasch.	May 8
	Quinq; Pasch.	May 15
	Craft. Ascen.	May 19
Trinity Term begins June 9, and ends June 28, and hath 4 returns.	Craft. Trin.	June 5
	Octab. Trin.	June 12
	Quind. Trin.	June 19
	Tref. Trin.	June 26
Michaelmas Term begins October 23, and ends November 28, and hath 6 returns.	Tref. Mich.	October 30
	Mens. Mich.	October 23
	Craft. Anim.	November 1
	Craft. Mart.	November 12
	Octab. Mart.	November 19
	Quind. Mart.	November 25

Here stands the Terms, with their Returns,
The Lawyers laugh, their Clients mourns.

Venus is our Evening Star to *January* 19, from thence she is our Morning Star till *Novemb.* 6, from thence an Evening Star to the years end.

A Table of Simple Interest at Six per Cent.

Shillings

Pounds

THis Table shews the Interest of any sum of Money from 1 *s.* to 100*l.* from a day to a year. And by the help of Addition you may compute the Interest of any sum whatsoever. And note, that for the greater exactness the peny is divided into a 100 parts; so that 25 parts are a farthing, and 50 parts an half-peny, and 75 parts 3 farthings, *&c.*

Example:

The Interest of 100 *l.* for six months one Week and one day, is thus found by the Table.

		l.	*s.*	*d.*	*q.*		
Interest of 100 *l.*	for 6 mon.	03-	0-	0-	00	*l.*	*s.* *d.*
	for 1 week,	00-	2-	3-	61	*viz.*	3-2-7 half-peny
	for a day,	00-	0-	3-	94		
		03-	2-	7-	55		

A Regal Table in a more exact manner.

The Year, Month, and Day, (accounting the Year to begin Jan. 1.) wherein every King and Queen of Eng. since the Conquest began their reign.				The number of Years, Months, and Days, that every K. and Q. reigned 28 da. to a month.					The num. of Y expired in this Y. since they began to reign		The num. of Y expired in this Y. since they ended.

Here Gods Vicegerents do in order ſtand
And how ſucceſſively each Rul'd the Land,
May we not want a Monarch great indeed
Wiſe, good, and gratious, merciſull in need:
For ſuch a one may all good Chriſtians ſtand
With now and always for to Rule this Land.

WING

WING.

A PROGNOSTICATION,

for the Year of our

LORD GOD

1699.

Being the 3d after Biſſextile or Leap-year.

Wherein is contained the time of the Sun's Ingreſs into the Four Cardinal Signs, from our New Tables, with a Figure of the Heavens from the ſame Tables, at the time of the Sun's Ingreſs into *Aries*, with the Calculation of the viſible Eclipſes from the ſaid Tables. A Table ſhewing the hour of the day by a Rod, or hand ſtick, alſo a pleaſant Chronology of memorable things ſince the Creation. A Calculation of the Conjunction of *Mars* and *Venus* in *Auguſt*, and alſo the time of the ☌ of *Venus* and *Cor Leonis* in the ſame Month, demonſtrating the eaſe, eaſe and expedition of the new Tables in our *Scientia Stellarum*.

By *John Wing*, Math.

CAMBRIDGE,
Printed by *John Hayes*, Printer to the Univerſity, 1699.

A Table shewing the true Hour of the Day by a plain staff divided into 10 equal parts.

WING.

☞ Note that q stands for Quadrans a quarter of a part; ſ for ſemiſſis half; and d for Dodrans three quarters of a part.

To find the true Hour of the Day by the former Table.

TAke a Staff of what length you pleaſe, and with a pair of Compaſſes divide it into ten equal parts marking them upon the Staff; then in ſome level place where the Sun doth ſhine, ſet it upright, and mark where the end of the ſhadow falls; which done, meaſure with your Staff the length of the ſhadow, and note the parts it contains, which find out in this Table right againſt the day of the month, and over head you will find the true hour of the day; as will appear more clearly by example.

Suppoſe the 9 of *April* or 13 of *Auguſt* I ſhould find the ſhadow of the Staff to be 30 parts and a quarter of a part more, that is, three Staffs length, and a quarter of a part, therefore ſeeking in the Table, againſt the ſaid days, I find 30 *q.* which is 30 parts and a quarter; and I ſee over head that it is then either 7 a clock in the morning, or 5 in the afternoon; ſo that if your obſervation was in the morning, it was 7; but if in the afternoon, 5 a clock.

Thus the 13 of *February*, or 8 of *October*, if the ſhadow of the Staff be juſt 19 parts, it is 12 a clock. If 20 it's one a clock, if 24 two a clock, if the obſervation be made in the afternoon.

Thus you ſee the hour of the Day is exactly and ſpeedily found, by a Rod or Staff and the help of this Table; ſo likewiſe by the Kallender part may the hour of the Night be known either by the Moon, Planets, or Fixed Stars, being of excellent uſe to all ſorts of Men.

A Compendious Chronology of Memorable things since the Creation to this Year 1699.

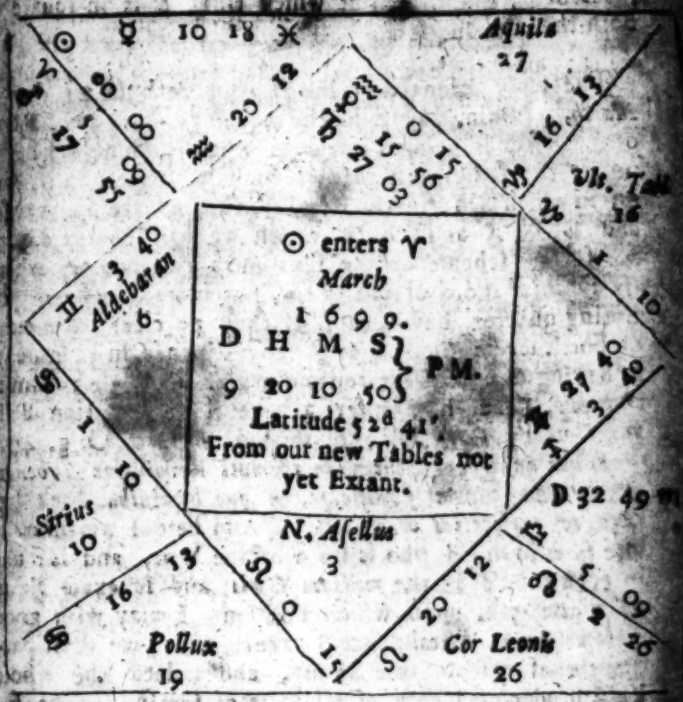
Time slides away and cannot be regain'd,
Mens Actions also on this Wheel are strain'd;
But Ile not dwell at this time on this Theme,
But turn my Genius to the following Scheme,
Where to enquire what things may come to pass,
Whether peace or plenty, or rapine and wars,
But by what method, and what author I
Must trace this Scheme I know not certainly:
If I give credit to some Authors ways,
Who Heroes like appeareth in these days,
I'm then confounded for I cannot see
Scarce Two together fairly to agree.
Well then, Ile go the way that I think's plain,
And leave the other to this learned Train.

Of the Spring Quarter.

THE Year is commonly or vulgarly divided into four Parts or Quarters, viz. Spring, Summer, Autumn and Winter, the first or Spring Quarter is chief and princi-



principal, as being the time from which the future ſtate and condition of the ſucceeding Year may be diſcovered, which cometh to paſs this Year in the Meridian of *Stamford*, on Friday the 10th. day of *March* 10 minutes 50 ſeconds paſt 8 in the morning, at which time the Earth really entring Libra, the Sun ſeeming to touch the firſt point of Aries, at which time the Heavens are thus poſited.

The preventional Full Moon happens upon the 9th. day of *March*, 3 min. paſt 7 at night, at which time 8 de-

of Libra ascends in the Eastern Finitor, and 10 degrees of ♋ culminates, at which time ♃ is in square to both the Luminaries.

The postventional new Moon happeneth the 21 day of *March*, 31 min. past 8 in the morning, then 22 degrees of ♊ ascends, and 15 degrees of ♒ culminates, being nearly the same with that of the suns Ingress into Aries, in which Scheme the two Infortunates are in Sextile, and ♄ △ ♂ and ✱ ☿, which we shall compare with the former scheme of the suns entrance into ♈ where ♄ is chief Lord of the Year, but more chiefly of the Spring quarter, having not less then 35 clear testimonies of Fortitude, to whom ♃ ought to be joyned in Judgment, as having also 26 clear testimonies of Fortitude; admitting this, I shall here insert a general Observation delivered us by *Haly*, fol. 356. de Jud. Astr. & Orig. 472. *Dominus anni bene positus in themate Revolutionis, bonum & fertilem annum significat in quo hominibus bona fortuna & prosperitas promittitur.* And here I am morally sure ♄ is so found who is Lord of the Year, and is found in ♂ with ☿ in the *medium Cœli*, and in exact ✱ to ♃ in the 7th. upon which Positions I may with good reason (in an Astral sence) aver, that we shall participate of a seasonable Spring, and indeed the whole Year producing plenty of all sorts of Grain, for the sustenance of both Man and Beasts, and the Husbandman shall be very fortunate and successfull in all his honest labours: and doubtless there appears much more satisfaction and content of Mind amongst both Rich and Poor then lately there hath been. ♄ in ♂ with ☿ in the Mid-heaven, and both in ✱ to ♂ in ♈, promises no small peace, tranquillity and happiness to our *English* Nation; for the Moon though who is the Significator of the Common people be in a quartile Aspect of ♄, which might cause some Murmuring and Discontents of the Vulgar, yet the Moon being out of all her dignities, and gene-

generally weak in the scheme, gives less reason to suspect any such misfortunes. The scheme in general is of a peaceful and noble Tendency to our *English* Nation in earnest, and that Trading now flourisheth, and the Merchants trade with good success, as being free from storms, tempests, piracy, shipwracks, *&c.* And here we ought not to omit the Eclipses since they fall so remarkably, upon the Opposition preventional, and Conjunction postventional, 'tis the opinion of some Authors, *Eclipses luminarum maxime agunt in illas Regiones, quæ sunt sub signo ecliptico.* And according to *Ptolomy lib* 2. *cap.* 8. they operate more efficaciously where they are Vertical, or where the chief significators shall pass by their Zenith in the time of the Eclipse; but to come nearer the matter, *Proclus* tells us an Eclipse of the Moon in the last face of Virgo, is of ill consequence to some Mercurialists, either to their professions or persons, and the same Author tells us, that an Eclipse of the Sun in the 2d. face of Aries (for so both these Eclipses happen) shewes discontent to some King or Great person in the world, with a Corruption of fruits growing upon trees, &c. Neither of which (I hope) much concerns us; and thus I shall with these following Verses conclude the Spring quarter.

Then for Conclusion let it be remembred,
The thing that's wanting never can be numbred:
The noise and terrour of the War doth cease,
Instead thereof comes Plenty, Love and Peace:
For all these Blessings let each one bear a part
In praising God from th' bottom of his heart.

Of the Summer Quarter.

THE Summer Quarter is always said to begin when the our Earthly Globe inclining Southward 23 deg. 29 min.,

Table 15 sec. towards the Sun, will volve and remove us be Northern Inhabitants to the greatest portion of day, when the Sun (according to appearance) enters into the first minute of ♋, which either way taken falleth this year upon Saturday the 21 day of *June* 45 minutes past 8 in the morning.

Of the Autumn Quarter.

THE Autumn or Harvest Quarter beginneth at such time as the Sun toucheth the first scruple of the Equinoctial sign ♎, or more really when the Earth enters ♈, hath volved her self at right Angles to the Sun, and receiveth a like portion of light and darkness, which either way taken, happens this Year on Tuesday the 22 day of *September* at 9 hours 44 min. 48 seconds afternoon. And here is two things very remarkable in this Autumnal Progress, the first is a great and visible Eclipse of the Sun the day following, and at the same time the two Infortunes in exact opposition from ☊ and ♒, which is of an ill tendency I fear, as producing some sore and grievous Distemper, as Plague, Pestilence, &c. by the Corruption of the Air, but chiefly in those places represented by the Astrisms they appear from, which tho' they are far remote from us, yet I fear we shall not altogether be quit of its Effects; hence I conclude it will be a sickly Autumn, and death of a great many Elderly and Middle-aged Persons, which the God of mercy fit us all for. *Amen.*

Of the Winter Quarter.

THE last Quarter called Winter makes its entrance at such time as our Earthly Globe by its Circumro-

ration

ion hath volved it self to the greatest Northern inclina-
, whereby we being furthest deflected from the Suns
, receive least light, and causes our shortest day and
gest night, or (according to appearance) when the Sun
ers ♈, which either way taken, falls this year upon
onday the 11 day of *December*, 6minutes before noon.

Of the Eclipses this Year 1699.

N this present Year will happen to be seen to the In-
habitants of this earthly Globe four Eclipses of the
luminaries, *viz.* two of the Sun, and two of the Moon,
t only two of them will be Visible in our *British* He-
isphere, and that is the first of the Moon, and the last
the Sun; the Calculation of the visible Eclipses I shall
re insert in order.

The first is an Eclipse of the lesser Luminary the Moon
on the 5th. day of *March* in the evening, according to
e following Calculation

The Calculation.

		S D	D H	′	″
The middle time of the true ☌	*March*	5	07	05	28
The Suns true place		♓	25	29	30
The Moons excentrick place		♍	25	29	30
The North Node sub.		6	02	40	27

Hourly motion ☽ ☌ ☉			29
Time of incidence		1	24
Interval sub.			6
The total duration		2	48

Hence	H	′	″	
The beginning of the Eclipse is at	5	30	02	P.M.
The middle is at	6	54	17	P.M.
The end of the Eclipse is at	7	18	32	P.M.

Latitude ☽ at beginning	41	22	South descend.
Latit. ☽ at end	33	20	South descend.

The second Eclipse is of the Sun the 21 day of *March* near 9 in the morning, and altho the Sun be near 4 hours high, yet this solar Eclipse cannot be seen here, by reason of the Moons great south latitude, which being much increased by her Parallax, doth far exceed the sum of the Semidiameters, which proves the Impossibility of its being visible here, but will be conspicuous in the south parts of the World.

The third is an invisible Eclipse of the Moon on the 30 day of *August* near 11 before noon, and will be visible to our Antipodes.

The Fourth is a great Eclipse of the Sun to be seen of if clouds interpose not, upon the 13 day of *September* fore noon, according to the following Calculation.

	S	D			
	D	H	'	"	
middle time of the true ☌ is *Sept.*	12	22	45	52	
ar time the pla. of the Sun & Moon is ♎		00	31	57	
ean Anomaly of the Sun is	2	25	04	06	
lean Anomaly of the Moon is	8	09	33	33	
orth Node subſtr.	5	22	38	00	
rgument of Latitude	0	07	59	37	
atitude of the Moon North			41	41	
eduction ſubſtr.			1	56	
ime of Reduction add			3	33	
rue ☌ reſpecting the Ecliptick *Sep.*	12	22	49	25	
The Equation of time add.				11	
The apparent time of the true ☌ is *Sep.*	12	22	49	36	
The Parallax of Longitude is			27	58	
The Parallax of Latitude			37	47	
To the preceding the true ☌, *viz.*		21	49	36	
The Parallax of Longitude is			35	21	
The Parallax of Latitude			34	35	
True motion ☽ á ☉ in one hour			32	35	
The difference of Parallax ſub.			7	23	
Viſible motion ☽ á ☉ in on hour			25	12	
The Interval of the true and viſ. ☌ ſub.		1	05	35	
Hence the viſible ☌ is *Sept.*	12	21	43	01	
At which time the Parallax of Longitude is			36	09	
Parallax of Latitude, ſo:			34	16	
Diſtance of the Sun and Moon is			36	09	
Latitud of the Moon no th			38	40	
Viſible Latitude Moon N aſc.			4	30	
The ſemidiameter of the Sun			16	13	
Semidiameter of the Moon			16	03	
Sum of their ſemidiameters			32	16	
Scruples deficient			27	46	
Digits eclipſed 10 16' 20"		10	16	20	

Scruples

Scruples of incidence			31	☌
To 1 hour before the visible ☌, viz.	12	20	43	☌
Parallax of Longitude is			40	☌
Parallax of Latitude			31	☌
Horaria diff. of Parallax sub.			4	☌
Visible hourly motion			27	☌
Time of incidence		1	08	☌
To 1 hour after the visible ☌, viz.	12	22	43	☌
The Parallax of Longitude is			28	☌
Parallax of Latitude			37	☌
Hourly difference of Parallax			7	☌
The visible hourly motion ☽ á ☉			25	☌
Time of Repletion		1	16	☌
Total duration		2	24	☌
Interval subtract.				☌

Hence *Sept.* 13 day	H	′	″	
The beginning of the Eclipse	8	33	16	before noon.
The middle or greatest Obscurat.	9	42	04	
The visible Conjunction	9	43	01	
The end of the Eclipse	10	58	11	

Visible lat. ☽ at beginning	4	23	No. asc.
Visible lat ☽ at end	4	40	

The Calculation of the Conjunction of Mars *and* Venus *August* 7th. *from our New Tables in* Scientia Stellarum.

I here present the Mathematical Reader with the Calculation of the ♂ of ♂ and ♀ from our New Tables shewing their natural plainness, and by how much easier way the Planets places both in Longitude and Latitude are obtained then by any other Tables yet extant. It will be a piece of Ingenuity as well as Justice to observe the exact Time of this Conjunction, with their difference of Latitudes, for according to this Calculation the ♂ happens in the morning, when ♂ and ♀ are not fully half an hour high; so that if Clouds hinder not, 'twill be easie to make an exact Observation thereof.

Fa

For the Longitude and Latitude of ♂.

Tempus datum.	Longit. ♂ S D ′ ″	Anomal. ♂ S D ′ ″	Node ♂ S D ″	♂ ′
1699	11 15 19 00	6 14 20 00	1 17 55 00	Nod.
August 6	3 24 15 00	3 24 14 00	3 17 33 53	Ecl. pla.
Hours 14	18 21	18 21	1 29 38 53	Arg. Lat.
Min. 10	13	13		
Mea. mot. ♂	3 09 52 34	10 08 52 34	Log. ⊙ and ♂.	
Prosth. Ad.	7 41 19	Logarith. ♂.		520926
Eclipt. plac.	3 17 33 53	Logarith. ⊙.		500524
Suns plac.	4 24 12 49	Numer. Logarith.		979598
Ano. Com.	1 06 38 56	Propor. Scr.	0 51′ 45″	993576
Par. Orb. Ad.	13 57 18	Max. Lat	1 12 00	500524
Longit. ♂	4 01 31 11	Lat. ♂ N.A.	1 02 07	823679

For the Longitude and Latitude of ♀.

Tempus datum.	Longit. ♀ S ⊙ ′ ″	Anomal. ♀ S ⊙ ′ ″	Node ♀ S ⊙ ′ ″	♀
1699	3 08 44 00	5 07 20 00	2 14 20 00	Node
August 6	11 19 17 00	11 19 17 00	2 28 35 37	Ecl. pla.
Hours 14	56 04	56 04	0 14 15 37	A. Lat.
Min. 10	40	40		
Mea. mot. ♀	2 28 57 44	4 27 33 44	Log. ⊙ and ♀	
Prosth. sub.	22 07	Logar. ♀		485683
Eclipt. plac.	2 28 35 37	Logar. ⊙		500524
Suns plac.	4 24 12 49	Numer. Log.		985159
Anom. Com.	10 04 22 48	Propor. Scrup.	0 14 46	939113
Parallax sub.	22 41 38	Max. Latit.	1 35 00	842142
Longit. ♀	4 01 31 11	Lat. ♀ N.A.	0 23 40	781255

Hence *Mars* is Elevated above *Venus* 38′ 27″.

Again, *August* the 26 day at 7 at night *Venus* is in Conjunction with that glorious fixed Star *Cor Leonis*, but by

by reason ♀ is a Morning ſtar, they may be obſerved ve
near together on the 26 and 26 day before day, ♀ b
ing elevated above *Cor* ♌ 38′ 3″ ½ for according to o
Tables, at the time before mentioned, *Venus* and *Cor Leo*
are in 25° 39′ 36′ of ♌, *Venus* at that time havi
1° 4′ 35″ of North Latitude, and *Cor* ♌ 26′ of Nort
Latitude only.

I have not Room to add any thing more of this Natu
neither ſhould I have inſerted the Calculation of the Co
junction of ♃ and ♀, but to let my Reader ſee by o
ſingle Demonſtration, with what eaſe and expedition th
Planets places both in Longitude and Latitude are found
as may (in due time) further appear by the Tables them
ſelves, which are grounded upon the beſt Obſervations
former Ages, and adjuſted to the moſt correct Obſervation
of this Age.

Pickworth in the County
of *Rutland*, *May* 1698.

John Wing
